Sales Offices in all Principal Cities of United States and Canada.

ARE you one of the increasing number of people who are becoming actively conscious of their radiators—recognizing them for what they are—efficient heating devices but bulky metal castings nevertheless—striking discordant notes amid the harmony of handsome and colorful furnishings?

Architects and Decorators speak of "radiator problems" and often are at a loss to know what to do with them. A study of our varied line will show the attention we have given to this subject for many years, and the wealth of material we make for just this purpose.

So far as recessed radiators are concerned, the problem has been met by our FERROCRAFT Grilles which are produced in many artistic period designs. These famous grilles, cast in iron or bronze are to be seen in most of the principal buildings of the United States and Canada. Our less expensive grilles of wrought steel and bronze have also played an important part in this field—especially Steelcane" which is particularly suitable for residences, being "cane" in design but woven of steel strands instead of rattan.

Radiators set out in the room have been, until now, the harder problem, but our new steel Cabinets provide a proper covering for them, and they are the first radiator cabinets to combine pleasing designs and real furniture finishes with ample circulation for heating.

Eighty years experience in the heating and ventilating field enables us to offer Cabinets which in luxurious homes will be a harmonious part of the furnishings, and in more modest rooms graceful and useful pieces of furniture.

Tuttle & Bailey Radiator Cabinets *are* decorative furniture, but they have also many practical benefits.

Cleanliness is promoted

The currents of heated air are directed away from the wall, out into the room, keeping the walls and curtains free from the usual streaks and soil above a radiator.

Health is conserved

The super dry air of the heated room in winter time is properly moistened from the humidifier, reducing the likelihood of colds and throat troubles.

Fuel is saved

An economy of fuel follows, because a lower temperature with the right degree of humidity is as comfortable as one several degrees higher which lacks moisture.

And waste space utilized

All the year round, these Cabinets give more *usable* space—a cosy window seat over the radiator or a useful console shelf.

These are money saving benefits; fewer doctors' bills and less expense for redecorating and cleaning and for fuel. Exquisite pieces of furniture, these Cabinets return their cost in definite savings.

MADE entirely of fine furniture metal, they are skillfully constructed to make strong rigid seats and shelves.

The front panels only, have grilles, the back, ends and top being of solid steel. All tops are hinged to provide ready access to the radiator valve and humidifying pan, and a door is cut in the lower part of one end for high radiators with low valves.

Complete circulation of heat is assured by exclusive methods. The wide choice we offer of different grilles, finishes and ornaments, as shown on page 4, makes it possible to harmonize our Cabinets with other furnishings.

Our "finish" for these Cabinets is distinctive. Only the most durable is used, and baked on in great ovens, heated to a high temperature. In reproducing woods, the graining is done by hand, which avoids the machine-like look of "plate graining." Our hand grained reproductions look just like the most beautifully finished woods. Twelve Standard finishes are offered.

Choice of Finishes *(for all our Steel Cabinets)*

The following are the standard finishes, or we will match samples.

Group 1 (Grained wood reproductions)

FINISH	STRIPING
American Walnut	Gold
French Walnut	Gold
High Lighted Antique	Green
Red Mahogany	None
Brown Mahogany	None
Golden Oak	None
Flemish	None

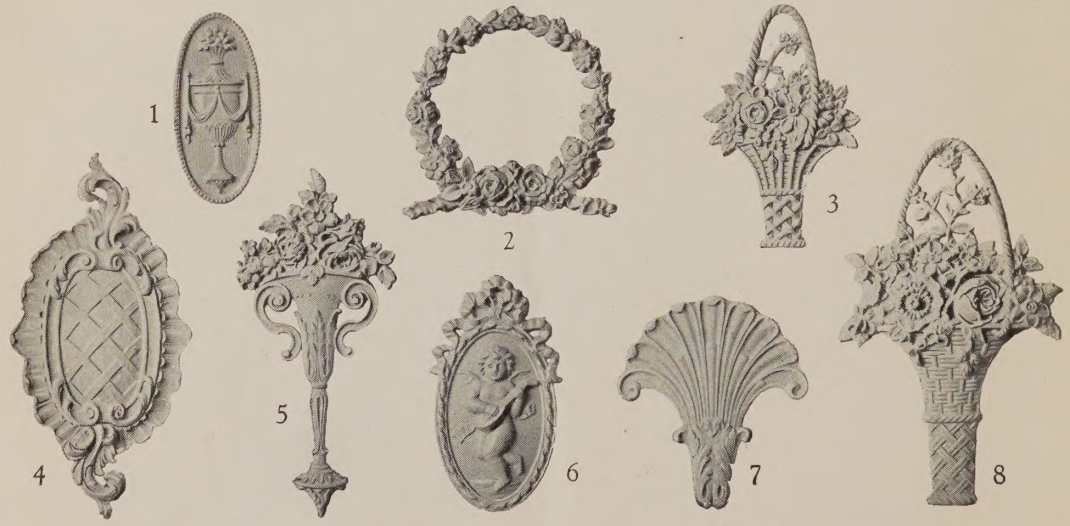
Group 2 (Enamels)

FINISH	STRIPING
Ivory	Blue
Old Ivory	Brown
Green	Gray
Gray	Gold
Pink	Green

Striping, as mentioned, is optional without extra cost, but will be applied as in schedule above unless otherwise ordered.

If desired, grilles can be finished in different shade than frames, at slight additional cost.

Choice of Ornaments *(for styles on pages 2 and 3)*



Any of these ornaments, attached to the grilles, will give greater decorative effects, and should be selected to harmonize with the other furnishings of the room.

Longacre Style.

Grilles are standard ½ inch square mesh only.

For Commercial Use

Tuttle & Bailey Radiator Cabinets are used extensively in commercial premises, stores, show rooms and offices.

In the most costly of all space—that used for business purposes—these Cabinets furnish more *usable* space—a seat or handy shelf for papers and books, more display room in the Store.

Such premises are always expensive to keep clean, but covering radiators will prevent streaked walls and obviate the need for annual re-decorating. This saving will pay for the Cabinets.

As to appearance—a bare radiator is as obtrusive in a well appointed office or richly furnished show room as in a home.

Tuttle & Bailey Radiator Cabinets have been installed by many prominent concerns, such as The Gorham Co., National Lamp Works, Cuba Co., Dollar Steamship Line, Minerva Auto Show Room and American Safety Razor Co.
